

The **National Registries Center (NRC)** has this past 27th of March launched an initiative entitled, “**Virtual One Stop Shop**” (**eCNR**) by which we will transform in the coming months the way public services will be rendered in El Salvador. Furthermore, this system will improve the pillars of public service between Registry and Cadastre administration, the public, and both domestic and foreign companies.

The **Virtual One Stop Shop** showcases a catalogue of our clients’ integral products and services creating a virtual counter in the comfort of your own homes, law offices, financial institutions, private offices, etc. This system established the NRC as the first government level institution offering service value, supported by technical tools that are able to go to scale. The **Products and Services Catalogue** includes data which is interlinked and interrelated with the all other types of registries in the NRC, such as the Registry for Real Property and Mortgages; Registry of Intellectual Property; Registry of Commerce and the Institute of Geography and National Cadastre. All are linked through a portal that integrates services not only using traditional mechanisms, but also utilizing other specialized mechanisms such as movables for which we are offering for example notification of transactions.

The **eCNR** is an institutional portal developed by using the highest technology standards and cutting edge tools and service oriented infrastructure (SOA) that helps us have a

Ventanilla Única Virtual

flexible platform from which to expand. In its core is the public and foreign and domestic firms.

By way of **eCNR** we will boost and consolidate resilient and efficient relations with the public, firms and suppliers, increase trade, foreign and domestic investments and lift administrative barriers that in its core have economic factors that will be diluted through cutting operational costs, transport costs, and time, among others. This system will directly impact the national economy contributing to social investment projects and spur competitiveness on an international level.

The **eCNR** through its **Virtual One Stop Shop** will make possible for transactions to be less bureaucratic, decreasing the need for intervention and it will especially strengthen and consolidate our linkages with the public, firms and providers.

With this system fully operational, the NRC is better addressing the needs of our clients, eliminating the distance factor, eradicating the physical challenges for elderly people and any other persons unable to access the NCR. The working hours have been extended and the service offerings expanded.

The NRC vision is directly contributing to the improved standing of our dear country El Salvador in the international economic indicators of the World Bank, the “Doing Business” Indicators ([www.doingbusiness.org](http://www.doingbusiness.org)). Presently, our country is in the 69<sup>th</sup> place and our goal is to be among the first 20 economies of the total 178 countries on the list.

We in the El Salvador National Registries Center, are very optimistic and proud to be the pioneers in raising awareness at the Government level about the modernization of public administration afoot. This is evident through our services available since March 31<sup>st</sup>, found on our webpage ([www.cnr.gob.sv](http://www.cnr.gob.sv)) which we are constantly improving, and upgrading, thus, adding value gradually with new service offerings and products all with the goal to fuel our countries development.

We invite you to visit and learn more about our **Virtual One Stop Shop**, on Wednesday, May 21 from 3:00pm-4:40pm in the “Wyoming” venue and be part of this ongoing transformation.
