Indiana	We have used PCC for our Business Entity, UCC, UCC XML, Trademark and INBiz applications. INBiz is the culmination of a series of projects with our office and other state and local agencies. Please let us know if we can assist you in your process.

Jurisdiction	Question(s)
	<p>Hawaii is beginning a modernization of our current systems. We would appreciate information on what software solutions you use in your business registration processing workflow. This would assist us immensely.</p>
Iowa	<p>In Iowa, we modernized our business registration process a few years ago, allowing [for the first time] users to form their Iowa corporation or LLC online. Before 2018, all our business registrations were paper-based.</p> <p>We built our system in-house, using contract and in-house developers. We added UCCs to that same system about a year later (UCCs were already online but migrated to our new system).</p> <p>Because our business registration process was paper-based prior to 2018, this new system has saved thousands of hours in staff time, and reduced the waiting period for business registrations from up to three weeks to less than one hour (for online submissions). About 80% of LLCs formed in Iowa are now done online.</p> <p>Happy to answer any other questions.</p>
Kansas	
Kentucky	
Louisiana	<p>We built our custom system ourselves with PCC launching in 2009. We have been improving/expanding the system ever since. We use the concept of a control set to encapsulate work, workflow, payment and general ledger information. The backend system has a queue where users or supervisors can assign work that has come in from our website or one-stop portal or has come through mail/fax/email. Mail/fax/email filings must be entered into a control set manually. Scanning and uploading of images is also available for mail/fax/email filings.</p> <p>A payment tab in the control set handles paper check scanning and allows credit cards to be processed if the customer is in person. The combination of payment and work determines the general ledger information which is available by simply running a report after payments have posted to the bank. --thanks</p>
